Object Designer

Manage database objects through a clear and responsive interface that breaks down query writing into structured tabs. Allow you to write complex queries with greater confidence and accuracy at every step.

Query Edit and Debugger

Accelerate your coding process with Code Completion and Code Snippet, and gain valuable insights into query-database interaction by visualizing the execution plan. You can also visually construct queries using a set of interactive tools. Locate coding errors with our debugging component, allowing you to set breakpoints, step through the program, view and modify variable values, and examine the call stack for seamless troubleshooting.

Leverage built-in actions to explain SQL, helping you understand complex logic and data flow, tune and optimize SQL for maximum performance, and format and beautify SQL for clean, readable code. Ask AI also provides instant suggestions to fix all sorts of errors, guiding you towards best practices and improving code quality with every correction.

Migration

Data Transfer, Data Synchronization and Structure Synchronization help you migrate your data easier and faster for less overhead. Deliver detailed, step-by-step guidelines for transferring data across various DBMS. Compare and synchronize data and structure between databases. Set up and deploy the comparisons in seconds, and get the detailed script to precisely outlines the changes you want to execute.

Model

Convert your databases into graphical representations and build multiple models within a single workspace to illustrate different model objects using Relational, Dimensional, and Data Vault 2.0 methods. Align your model design with the actual database to maintain the integrity of the model and simplify the navigation and comprehension of complex systems.

BI

Create visual representations of large data sets to unearth patterns, trends and relationships among data, and present your findings in dashboard for sharing. In a dashboard, all charts linked to the same data source are interconnected, allowing any actions performed on the charts to instantly update and reflect your selections.

Import and Export

Import data into a database from various formats, or through an ODBC connection after setting up a data source connection. Seamlessly export data from tables, collections, views, or query results to popular formats such as Excel, Access, CSV and more.
