

Shadow AI Monitoring

AI Is Now Part of Your Attack Surface. We Secure It.

Employees are adopting AI faster than security teams can govern it. Coding assistants, browser extensions, and MCP connections are reaching code and data outside any approved policy. Shadow AI Monitoring shows you which AI tools are installed on your endpoints, what they're connected to, and who is using them, so AI becomes a competitive advantage, not an unmanaged liability.

What It Does

Discover AI Tool in Use

See AI coding assistants, browser extensions, and AI files on your endpoints, with new extension installs caught in real time.

Expose Unauthorized MCP Connections

Detect local and cloud MCP servers within 15 minutes of activation, including ones in no config file.

Reduce Shadow-AI Compliance Risk

Know which user and process triggered each coding tool and MCP detection, with full logs for security reviews.

From AI Discovery to Governed Use

01

Discover AI Tools

Inventory AI tools, extensions & files on endpoints.

02

Tie to Identity

User & process attribution for coding tools and MCP.

03

Prioritize Risk

Correlate usage to data & compliance risk.

04

Inform Policy

Real data to base AI acceptable-use decisions on.

WHY IT MATTERS

- AI is already in your org, whether or not IT approved it.
- Coding assistants and MCP connections reach code and data outside approved policy.
- You can't govern what you can't see — unmonitored AI is a compliance blind spot.

The AgileBlue Difference

Sees Beyond Chat Apps

Covers AI coding assistants, browser extensions, and MCP connections, not just chatbots.

Built in, Not Bolted On

Native to the platform, correlated with threat intelligence, backed 24/7 by human analysts.

No Additional Dashboard

Feeds directly into your Cyber Risk Score for a single, clear view.

Turn shadow AI into governed AI.

Gain visibility into the AI tools on your endpoints, see who is using them, and get the evidence to build an AI acceptable-use policy.
