Company: TECBOMO LIMITED LIABILITY

Application Database Administrator | Position Description

Application database administrator provides technical leadership to maintain day to day support for L&R databases across multiple platforms (Oracle Exadata, MSSQL, Cloud Database platform such as AWS, and Big Data / NoSQL Database platform). Design, monitor, maintain, and application performance tune production databases while ensuring high levels of data availability.

Application Database Administrator responsibilities include:
A. The Application Database Administrator's role is to design, monitor, maintain, and application performance tune production databases while ensuring high levels of data availability.
B. Analyzes data requirements, application and processing architectures, data dictionaries, and database schema(s), and then designs, develops, amends, optimizes, and certifies database schema design to meet system(s) requirements.
C. Gathers, analyzes, and normalizes relevant information related to, and from business processes, functions, and operations to evaluate data credibility and determine relevance and meaning.
D. Assists in developing and designing database and warehouse applications across multiple platforms and computing environments.
E. Assists in the development of an overall data architecture that supports the information needs of the business in a flexible but secure environment.
F. Responsible for developing, implementing, and overseeing database policies and procedures to ensure databases' integrity and availability and accompanying software.
G. Performs the capacity planning required to create and maintain the database
H. Communicate to stakeholders via standard methods
I. Duties include performance tuning, monitoring, software installs and upgrades, UNIX shell scripting, and physical and logical database design
J. Some Oracle and Teradata databases are very large, with a minimum size of 500 GB and 1000 users
    j.2 Analyze and plan for anticipated changes in data capacity requirements, develop and administer data standards, policies, and procedures
    j.2 Serve as a key contributor and technical resource within the Production Informatics group
    j.3 Provide direction for database design, development, and administration in support of production operations
K. Mentor other team members in database development and support
L. Develop, implement and lead projects and project plans when necessary
